

Thermostat is the most important part. Taiwan and Chinese duplicator uses "heat protector,"

Sumomoto uses genuine "thermostat" produced in the USA.

Heat Protector is normally used to prevent fire accidents - like hair drier; Its major function is not to control the temperature;

Thermostat is used in precision control. The thermostat is about 10 times price of heat protector;

The insulation fabric and inner fabric used in Taiwan tyre warmer is regular "Fire Resistant" material; This is vital in fire resistance and performance of the tyre warmer.

Sumomoto uses 100% kevlar and Nomex. And unique serial number for each individual warmer.

65%

Material costs 65% in Sumomoto tyre warmers;

25%

Material costs 25% in Taiwan tyre warmers;

(based on Chinese material market)

*Sumomoto tyre warmer can be traced by Serial Numbers.

Major difference between Taiwan products and Sumomoto products
For Tyre Warmers
